To Whom It May Concern:

System Tech has worked with the Boise Airport to create a 1.3 million dollar state of the art cabling (fiber and copper) infrastructure. The currently installed infrastructure supports both data and security systems and requires a highly skilled design build team who is familiar with the most current trends in the industry. System Tech met and exceeded this requirement throughout the project and continues to be a critical part of the process.

The installation required coordination between several contractors to meet the critical deadlines set for the scheduled, on-time, opening of the Boise Airport's new terminal building. System Tech demonstrated leadership with the various subcontractors to ensure that proper resources were supplied to the job. They kept the BOI staff abreast of any changes in scheduling and communicated any difficulties along the way so we could mitigate unplanned delays. System Tech has always been willing and able to provide additional labor above and beyond the stated needs of the contract when required.

I appreciated the superior skills demonstrated both technically and managerially by System Tech on various Boise Airport projects. I would recommend them as a highly capable contractor.

Don Larson

Information Technology Manager
